SUMMARY

Experienced IT Support Specialist with 16 years of expertise in delivering end-user technical support, maintaining IT infrastructure, and ensuring reliable business operations. Adept at troubleshooting desktops, laptops, printers, operating systems, and network connectivity while providing timely resolutions to technical incidents. Passionate about technology, continuous learning, and process improvement, with a strong commitment to delivering exceptional user experiences and dependable IT services.

WORK EXPERIENCE

IT Support Specialist, PT. Mitra Info Paragon, Tbk.

Jan 2010 - Januari 2026

- Provide technical assistance to employees in using computers, applications, and networks to ensure work runs smoothly and without interruption.
- Install, configure, and update operating systems and work applications to ensure they are always optimal and safe to use.
- Handle various technical issues (troubleshooting), such as slow computers, application errors, disconnected networks, or malfunctioning devices.
- Conduct routine network checks and maintenance (LAN and Wi-Fi), including ensuring a stable internet connection and proper functioning of network devices such as routers and switches.
- Maintain system security by ensuring the use of antivirus software, performing regular data backups, and helping prevent security risks such as viruses and malware.
- Record and document every problem and solution as a reference for future improvements.
- Manage user accounts, such as creating new accounts, setting access rights according to job title, and assisting with password resets if necessary.
- Install and configure devices such as computers, laptops, printers, and other supporting devices according to operational needs.
- Coordinate with other IT teams or vendors if more complex issues arise and require further handling.
- Provide simple guidance to users so they can use devices and systems correctly and reduce usage errors.

EDUCATION

Bachelor of Gunadarma University with The best Predicate

- Understand the fundamentals of databases and information systems design.
- Participate in computer, network, and digital electronics laboratory labs.
- Learn system analysis and design using UML and flowcharts.
- Work on software development projects individually and in groups.
- Develop problem-solving, technical analysis, and troubleshooting skills.
- Become accustomed to working in teams, preparing technical documentation, and delivering project presentations.
- Understand the concepts of network security, computer architecture, and systems management.

LICENSES & CERTIFICATIONS

1. Linux Terminal Server Project Published by Gunadarma University

Feb 2009

The Linux Terminal Server Project (LTSP) is a system that allows multiple computers (clients) to use a single Linux server as a central computing hub. Client computers do not need to have an operating system or applications installed locally, as everything runs from the server over the network.

LTSP Works :

- A Linux server is installed with LTSP and provides the operating system, applications, and storage space.
- The client computer is powered on over the network (PXE Boot).
- The client obtains an IP address from a DHCP server.
- The client downloads the Linux operating system from the server over the network.
- The user logs in to the server.
- Applications run using server resources, while the client only displays the interface and receives input from the keyboard and mouse.

2. Multimedia Development Course Published by Gunadarma University

Mar 2009

- Learn graphic design, video editing, basic animation, digital content development, and web design using various multimedia software.
- Develop skills in creating visual materials, processing digital media, and effectively conveying information for business and organizational needs.
- Understand the basic principles of UI/UX, multimedia asset management, and collaboration in digital content development projects.
